

AI

AI can be used widely today i want to introduce about AI help drive the car.The good benefit about AI car.First,it can improve driving safety: The AI driving system can monitor the environment around the vehicle in real time, accurately identify road signs, vehicles, pedestrians and other obstacles to avoid traffic accidents.

Second,it can change the efficiency of traffic:AI can change the line whenever it want,this can avoid traffic jams and reduce traffic pressure.

Finally,with the help of AI people can drive more comfortable With this automatic driving function, people can free their hands to relax without tiring themselves. **【1】**

There are also some bad benefit about it.First the technology is not very good so sometimes there may be some problem happened.

Second,AI sometimes makes mistakes, which can be dangerous

Finally, It will increase dependence. Prolonged use of autonomous driving may cause people to react more slowly, leading to an accident the next time they drive.But AI driving is also relatively safe. There was only one car accident 7 years ago. **【2】**
